Differentiating features of Helminths SOME CHARACTERISTICS OF HELMINTHS The outer covering of helminths is the cuticle or tegument. Male nematodes of several species possess accessory sex organs that are external modifications of the cuticle. Tapeworms are unique in lacking an alimentary canal. This lack means that nutrients must be absorbed through the tegument. All flukes and tapeworm species that infect humans are hermaphroditic. Helminths, or worms, are bilaterally symmetrical — ...
